

SH-3H SEA KING

The SH-3H Sea King is a gas turbine powered helicopter used for anti-submarine warfare, rescue and assistance missions and transfer of cargo and personnel to ships at sea. The Sea King is able to stay airborne for more than five hours. Sea King helicopters are airborne during all flight operations from the ship.

A-6E INTRUDER

The A-6E Intruder is a carrier-borne, low-level attack bomber specifically designed to deliver a variety of ordnance on targets completely obscured by inclement weather or darkness. Flown by a crew of two and powered by two jet engines, the A-6E is equipped with a sophisticated weapons system and can carry five 2,000 pound general purpose bombs or a maximum of twenty-eight 500 pound bombs.

E-2C HAWKEYE

The E-2C Hawkeye is a carrier-airborne, early warning all-weather defensive aircraft with a rotating radar dome. The E-2C provides strike and traffic control, air surveillance, search and rescue guidance and communications. The Hawkeye is powered by two 4,600 horse power turboprop engines.
